Career Objective

To be a part of the organizational growth by delivering the responsibilities assigned which can be resulted to my personal career growth, can give me job satisfaction and motivation to deliver the best result for the organization for which I am working.

Education

B.Tech, Kalasalingam Academy of Research and Education Cybersecurity (Specialization)	CGPA 7.65	2022–Present
Intermediate, Oxford Vit Junior College MPC Stream	76%	2020–2022

Projects

Simple-Keylogger:

- Developed a Python-based keylogger using the pynput library to capture and log keystrokes in real time for educational and cybersecurity awareness purposes.
- Implemented a modular design with a Keylogger class to process key-press events and periodically write logs to a file.
- Created a logging mechanism that captures and stores keystrokes every 5 seconds with proper error handling and graceful termination.

SOC Home Lab Simulation:

- Built and managed a multi-OS Security Operations Center (SOC) home lab (Ubuntu, Kali, Win 10, Metasploitable2) to simulate real-world cyber defense scenarios.
- Implemented and configured the Elastic SIEM Stack and Snort IDS, including the development of custom IDS rules for targeted threat detection and alerting.
- Conducted simulated web attacks (against DVWA) and performed forensic network analysis using Wireshark to monitor traffic, validate alerts, and document the incident response lifecycle.

OWASP Top 10:

- Results-driven Cybersecurity Analyst with practical, hands-on experience in web application penetration testing and vulnerability assessment.
- Expertise in identifying, exploiting, and meticulously documenting critical security flaws, with detailed knowledge of the OWASP Top 10 (SQL Injection, Cross-Site Scripting, Broken Access Control, etc.).
- Successfully completed and reported on a comprehensive security walkthrough of the OWASP Juice Shop platform, demonstrating strong technical reporting and offensive security principles.

Technical Skills

- Operating Systems: Linux (Ubuntu/Kali/Arch/Fedora)
- Programming: Python (OOP), C, Bash
- Web Development: HTML, CSS, Flask
- Networking: Switching, Routing, subnetting, Cisco IOS (packet Tracer)
- Security Tools: Snort IDS (Rule Writing), Wazuh SIEM, Wireshark, OpenCTI, YARA

Certifications

Google Cybersecurity Professional Certificate
